

# Tyco Deep Well Progress Update: February 2024

---

## Program Objective

Tyco's priority is to ensure the community's water is **safe** and that residents are protected from PFAS impacts from historic operations by providing a **long term, reliable drinking water solution** for residents in the Potable Well Sampling Area

## Results to Date

- Radium levels are reduced to approximately an order or magnitude below (1/10) the maximum contaminant level
- Other compounds are being filtered to **multiple orders of magnitude below criteria**

## Deep Well Requests

- **113** Replacement wells requested to date; additional requests received on regular basis
  - **27** Replacement wells installed
  - **86** Wells queued for installation
  - Bottled water and POETS service continuing until deep well completion
  - Construction planned through at least **2024**
  - Currently partnering with **14 local contractors**
  - Outreach continues and opportunity remains for all PWSA parcel owners
- The treated water is **safe to drink**
  - Groundwater monitoring is ongoing
    - 1 year of individual **private well monitoring**
    - Results are **consistent** from quarter to quarter
    - 4 - 5 deep bedrock **monitoring wells throughout community** being monitored under WDNR oversight
