**Re: Application for Special Use and Site Plan Approval – Veteran Hill Road Solar Project  
Veteran Hill Road, Veteran, New York  
Lot 39-00-1-14.1**

Dear Town of Veteran:

Enclosed please find additional information related to the Solar Energy System filed on behalf of Veteran Hill Road Solar LLC, an affiliate of Dynamic Energy LLC, for a proposed 3.8-megawatt (MW) ground-mounted Solar Energy System in the Town of Veteran, Chemung County, New York. Specifically, this submission provided supplemental information as requested by the Town Planning Board over the last several meetings, including:

Attachment 1 - Tree Survey Report  
Attachment 2 – Updated Photosimulations

We look forward to reviewing and discussing the above submittals with you at the upcoming Town Planning Board meeting. Please let us know if you have any questions or comments in the interim.

Sincerely,  
AKRF, Inc.

Elizabeth Weatherby  
Vice President, Energy Practice

Justin Seeney, P.E.  
Vice President

## Memorandum

---

**To:** Jason Funk, Dynamic Energy LLC  
**From:** Elizabeth Weatherby (Vice President); Brian Stoos (Technical Director)  
**Date:** August 26, 2026  
**Re:** Veteran Hill Solar Project Tree Survey Memo  
**cc:** Matt McDevitt, Dynamic Energy LLC

---

### INTRODUCTION

Dynamic Energy LLC (Dynamic Energy) is proposing the development of a solar farm on property on Veteran Hill Road in the Town of Veteran in Chemung County, New York (Project). The Project will be located on approximately 35 acres of forested habitat (see **Figure 1**) on Town of Veteran Tax Parcel 39.00-01-14.1 (Project Site).

The Town of Veteran Solar Law (Local Law 1 of 2026) requires applicants to minimize removal of existing trees larger than six inches in diameter at breast height (DBH) to the extent possible. Further, trees that need to be cleared are required to be surveyed and documented. After discussions with the Town Planning Board, it was agreed that due to existing conditions within the forested habitat, a representative sample across the Project Site could be surveyed to characterize the forested communities.

### METHODOLOGY

AKRF, Inc. (AKRF) surveyed the Project Site using a randomized-based survey methodology to document trees six inches or greater DBH. Three 75 foot wide transects, totaling 7.88 acres, were surveyed, with one transect oriented north/south and two transects oriented east/west (see **Figure 2**). For each tree within the transects which was greater than six inches DBH, the tree was mapped and the species, DBH, and tree condition rating were recorded. The tree condition rating is a sliding scale of 0 – 4, with 0 indicating the tree is dead and 4 that the tree is in good condition or health. The tree was then marked with paint to ensure that it was not counted a second time.

### TREE SURVEY RESULTS

AKRF scientists performed the tree survey on July 30 and 31, and August 11, 2026. There were 1,309 trees with a DBH of 6 inches or greater surveyed on the Project Site for an average of 166.2 trees per acre. The dominant species identified were sugar maple (*Acer saccharum*), red maple (*Acer rubrum*), northern red oak (*Quercus rubra*), white oak (*Quercus alba*), eastern white pine (*Pinus strobus*), and bigtooth aspen (*Populus grandidentata*) (see **Attachment B** for data). The trees ranged in size from 6.0 inches DBH to 61.0 inches DBH. **Table 1** presents the data for each species identified within the Project Site. There were no non-native species identified during the surveys.

| Table 1. Tree Data from Veteran Hill Solar Project |                      |              |             |              |                   |
|----------------------------------------------------|----------------------|--------------|-------------|--------------|-------------------|
| Tree Species                                       | Count of Individuals | Smallest DBH | Largest DBH | Average DBH  | Average Condition |
| Green ash                                          | 8                    | 8.0          | 12.7        | 9.78         | 2.13              |
| White ash                                          | 42                   | 6.0          | 14.0        | 9.28         | 0.50              |
| Bigtooth aspen                                     | 79                   | 6.0          | 18.2        | 11.95        | 2.92              |
| American beech                                     | 1                    | 7.9          | 7.9         | 7.90         | 4.00              |
| Gray birch                                         | 10                   | 6.2          | 11.0        | 7.92         | 3.80              |
| Paper birch                                        | 5                    | 6.2          | 10.5        | 8.56         | 3.40              |
| Sweet birch                                        | 8                    | 7.0          | 12.0        | 8.81         | 3.13              |
| Yellow birch                                       | 1                    | 11.0         | 11.0        | 11.00        | 3.00              |
| Black cherry                                       | 11                   | 6.0          | 18.0        | 8.96         | 2.82              |

Based on the Ecological Communities of New York State (Edinger et al. 2014) there were four main communities identified within the Project Site: Appalachian oak-pine forest, hemlock-northern hardwood forest, Appalachian oak-hickory forest, and mowed road/path. Each of the communities are described in further detail below and shown in **Figure 3**.

#### Appalachian oak-pine forest

Appalachian oak-pine forest is a mixed forest that occurs on sandy soils or on slopes with rocky soils that are well-drained. The canopy is dominated by a mixture of oaks and pines. The oaks include one or more of the following: black oak (*Quercus velutina*), chestnut oak (*Quercus montana*), red oak, white oak, and scarlet oak (*Quercus coccinea*). The pines are either white pine or pitch pine (*Pinus rigida*). Red maple, eastern hemlock (*Tsuga canadensis*), American

beech (*Fagus grandifolia*), and black cherry (*Prunus serotina*) are common associates occurring at low densities. This community occurs in the Appalachian Plateau, Hudson Valley, and Taconic Highlands ecozones.

#### Hemlock-northern hardwood forest

Hemlock-northern hardwood forest is a mixed forest that usually occurs on cool, mid-elevation slopes and on moist, well-drained sites at the margins of swamps. Within this community, eastern hemlock is codominant with any one to three of the following: red maple, sugar maple, yellow birch (*Betula alleghaniensis*), black birch (*Betula lenta*), red oak, American beech (*Fagus grandifolia*), white ash (*Fraxinus americana*), chestnut oak (*Quercus montana*), white oak, or eastern white pine. The cover of the eastern hemlock is variable, ranging from nearly pure stands to as little as 20%. Canopy cover can be quite dense, resulting in low light intensities on the forest floor and a relatively sparse ground layer. This community type is distributed throughout New York State.

#### Appalachian oak-hickory forest

Appalachian oak-hickory forest is a hardwood forest that occurs on well-drained sites with loam or sandy loam soils. The dominant trees include one or more of the following oaks: red oak, white oak, and black oak (*Quercus velutina*). Mixed with the oaks, usually at lower densities, are one or more of the following hickories: pignut (*Carya glabra*), shagbark (*Carya ovata*), and sweet pignut (*Carya ovalis*). Common associates are white ash, red maple, and hop hornbeam (*Ostrya virginiana*). This community type is found throughout upstate New York north of the Coastal Lowlands ecozone and is most common south of the Adirondacks ecozone.

#### Mowed road/path

The mowed roads/paths are defined as a mowed pathway through taller vegetation (e.g., meadows, old fields, woodlands, forests). The vegetation in these mowed paths may be dominated by grasses, sedges, and rushes.

### **CONCLUSION**

There were 1,309 trees with a DBH greater than 6 inches mapped and identified across the 7.88-acre survey area. Extrapolated to the entire 35-acre site, this would be approximately 5,812 trees within the Project Site. The dominant tree species were sugar maple, red maple, northern red oak, white oak, eastern white pine, and bigtooth aspen. The main ecological communities within the Project Site are Appalachian oak-pine forest, hemlock-northern hardwood forest, and Appalachian oak-hickory forest.

FYI - letter from Chief McInerney. I also have a draft response to Jimmie Joe I am hoping you could take a look at before we respond officially - would you have time to discuss today at all?

Regards,  
Elizabeth

Elizabeth,  
Attached is the requested letter from the fire department regarding concerns with the Veteran Hill Solar Farm Project.

If there should be any other questions, concerns or needs from the fire department, please let me know.

Sincerely,

Sean
