

**NOTICE OF FIRE HYDRANT FLUSHING
IN THE VILLAGE OF OAKDALE**

As part of our ongoing effort to provide safe and reliable drinking water, the Village of Oakdale Utilities Department will conduct hydrant flushing on the village's water mains, beginning on Monday, October 5th, 2026 and continuing until Friday, October 9th, 2026.

Purpose of Flushing: Water Mains are flushed to check the function of the hydrants and flush sediment out of the water system.

Avoid Cloudy or Discolored Water: Discolored water and temporary changes in water pressure may occur. If your water is discolored, please avoid running hot water or washing whites until your water is clear. If discolored water is observed, run cold water until your water is clear.

If you notice cloudy or discolored water - Discolored water is caused by naturally occurring iron minerals that are disturbed during the flushing process. This water disturbance is not a health threat. If discolored water continues after letting your faucets run for 20 minutes, please contact the Village Utilities at (608) 377-4236 or the Village Clerk at (608) 372-2927.
